Introduction

This document is intended as a brief guide to Inuktut (Inuktitut and Inuinnaqtun) spelling standards. Inuktut spelling standards (ISS) were developed by the Inuit Cultural Institute in 1976 to address inconsistencies in Inuktut spelling and ensure that there were consistent rules for writing Inuktut.

In November 2016 Inuit Uqausinginnik Taiguusiliuqtuit (IUT), the language authority for Nunavut, directed that these Inuktut spelling standards should be used for all official publications of the Government of Nunavut. As part of this directive, IUT stated that the Government of Nunavut must “facilitate the use of the standardized spelling rules by employees and others.” It also stated that IUT “will publish guidelines to facilitate the use of” Inuktut spelling standards by the general public.

Consistency in spelling is very important when producing documents in Inuktut. It allows Inuktut materials to be produced for all of Nunavut. It allows people to correctly predict the pronunciation of Inuktut words from the way they are written. By using a consistent set of symbols and spelling rules for all dialects, these Inuktut spelling standards make communication between regions and dialects easier while making the distinctive features of each dialect clearer.

This document was produced with the participation of the Department of Culture and Heritage and the Department of Education.

Overview

Inuktut spelling standards apply to all dialects of Inuktut but allow for pronunciation differences between dialects. This means that words that are pronounced differently in different dialects may be written differently using Inuktut spelling standards. For example, compare the Inuinnaqtun and North Baffin versions of the following words:

Inuinnaqtun	North Baffin
tulukkat	tulukkat
kakkiviaq	kakkiviaq
nirigapku	nirigakku
kipkaqtara	kikkaqtara
havaktuq	iqqanaijaqtuq
muqpaujaq	palaugaaq

Sometimes the words are exactly the same. Sometimes there is a small difference in pronunciation that cannot be predicted—for example, Inuinnaqtun has **pk** in some of the words where North Baffin has **kk** instead. Sometimes, as in the last two pairs of words, completely different words are used in different dialects. However, all of the variations shown above are written following Inuktut spelling standards. Inuinnaqtun speakers can write **kipkaq-** and North Baffin speakers can write **kikkaq-** according to the differences in their pronunciation.

A spelling like **kipkartara**, on the other hand, is not compliant with Inuktut spelling standards because it does not follow the rule that two consonants together are always both voiceless or both voiced (see the section titled “Writing consonant clusters”). This is *not* based on a dialectal difference in pronunciation: speakers who write **kipkartara** are not pronouncing the word differently from those who write **kipkaqtara**. Differences in spelling that are not based on differences in pronunciation create confusion and inconsistency, which Inuktut spelling standards are designed to avoid.

Inuktut spelling standards apply to writing in both syllabics and roman—the same spelling rules are followed in both. Traditionally, most dialects in Nunavut have been written in syllabics, while Inuinnaqtun has used roman. But it is possible to write any dialect in either roman or syllabics following the pronunciation in that dialect.

It should be emphasized that writing in roman does not automatically make text Inuinnaqtun. What makes dialects distinct is not the writing system used but the different words used in different dialects, which sometimes involve variations in grammar and pronunciation. *Any* dialect can therefore be written using a standard writing system, either syllabics or roman.

The sounds of Inuktut

The basic principle of Inuktut spelling standards is *one sound = one symbol*. We do not use different symbols to write the same sound. *Sounds are written differently only if they are pronounced differently*.

The sounds of Inuktut used in Inuktut standard spelling are *vowels* and *consonants*. *Vowels* are sounds made by the breath flowing freely through the mouth: **i**, **u**, and **a**. *Consonants* are sounds made by stopping or narrowing the flow of breath in some way: **p**, **t**, **k**, **g**, **m**, **n**, **s/h**, **l**, **j**, **v**, **r**, **q**, **ng**, and **ɬ**. **b**, **d**, and **f** can occur in some dialects.

In roman, vowels and consonants are all separate letters, with the exception of **ng**, which is a single sound written with two letters: it is *not* an **n** sound followed by a **g** sound. In syllabics, most of the characters represent one consonant + one vowel, while finals (or *naaniit*) are consonants with no vowel. In this guide we will mostly be talking about consonants, as this is where most spelling issues occur.

The consonants in Inuktut fall into three main groups according to how the sound is made: *voiceless*, *voiced*, and *nasal*.

Voiceless

These are sounds produced without the vibration of the vocal chords, just with breath, as in whispering.

p t k q s/h ɬ (f)

Voiced

These are sounds produced with the vibration of the vocal chords.

v l j g r (b d)

Nasal

These are sounds made by letting the sound go through the nose. **r** can combine with any of these nasal sounds.

m n ng (r)

If you try saying these consonant sounds by themselves without any vowel (this can be a bit difficult!), you should be able to hear and feel the difference between voiced, voiceless, and nasal.

Note that **r** by itself is voiced, but it can also be nasal when it is next to another nasal consonant, as in **arnaq**.

Variations in the sounds

Not all the sounds listed above exist in all dialects. For instance, the sound **t** is not used in Inuinnaqtun, South Baffin, or Nunavik dialects; these dialects will use **h, t, l, or s** instead, depending on the word.

s versus h

Inuinnaqtun, Nattilik, and most Kivalliq dialects have an **h** sound where other dialects have an **s** sound. According to Inuktut spelling standards, dialects that have an **h** sound can use **h** in writing.

hila havik ihuma

Other dialects use **s** instead.

sila savik isuma

j versus y

Inuinnaqtun speakers sometimes spell the **j** sound when it occurs by itself between two vowels as **y**.

iyi nauyaq hivayaut

However, **j** and **y** are just two different ways of writing the same sound and do not reflect a real difference in pronunciation between the dialects. In order for the spelling of this sound to be consistent across dialects, and to follow the *one sound = one symbol* principle of Inuktut spelling standards that the same symbols should be used if there is no difference in pronunciation, **j** can be used for all dialects. The words below are pronounced exactly the same as the words above:

iji naujaq hivajaut

Fine points of pronunciation

Some sounds, especially the voiced sounds, can shift their pronunciation slightly when they are combined with other consonants. Some differences you may notice:

- **g** has a softer pronunciation in a word like **atigi**, and a harder pronunciation (like the English **g** in **garden**) in a word like **iglu**.
- **v** likewise sounds like the English **b** in front of another consonant, as in **qavlu** or **uvlaaq**. This can also be represented by **bl**, as in **ublaaq** in the Inuinnaqtun and Kivalliq dialects.
- **j** becomes more like the **j** in the English **judge** when combined with another consonant: **kuujjuaq, ugjuk**, etc.
- In many dialects, when **l** is doubled as **ll**, it is pronounced like “**dl**,” as in **qulliq (qudliq)** or **kallak (kadlak)**.

However, all of these differences are minor. They are predictable and do not affect the meaning of the words. Therefore, *they are not reflected in the standard spelling*: **g** is always written **g** whether it is pronounced hard or soft, **v** is still written **v** even when it is pronounced more like **b**, and so on.

Writing consonant clusters

A consonant cluster is when two consonants are next to each other in a word:

iglu	arnaq
taaqtuq	uqsuq
maktaaq	tatqiq
kivgaluk	

The basic rule for writing consonant clusters in Inuktut standard spelling is that *both consonants have to be from the same group*. To provide a visual representation of this rule, the examples in this section are colour-coded, with each colour representing a consonant group. In correctly spelled consonant clusters, both letters are the same colour. In incorrectly spelled consonant clusters, each letter is a different colour. Remember, there are three consonant groups: voiceless, voiced, and nasal.

voiceless with voiceless (p, f, t, k, q, s/h, l)

napaaqtuq
tuktu / tuttu
piqsiq / piqhiq
aklunaaq / akhunaaq / aktunaaq /
atsunaaq

voiced with voiced (v, l, j, g, r, b, d)

iglu
uvlumi / ublumi / ullumi
arviq
ugjuk / ujjuk
qudliq / qulliq

nasal with nasal (m, n, ng, r)
(Keep in mind that r counts as either voiced or nasal!)

ingniq
imna / inna
arnaq
imruhiq / imnguhiq / imngusiq

Notice that some of the examples above have different pronunciations in different dialects, but they all follow the consonant-cluster spelling rule.

Sometimes when additional word chunks or grammatical endings are added to a word, two consonants from different groups come together. In this case we have to change one of them (usually the first one) so that they will be both voiceless, or both voiced, or both nasal.

ilihaq + vik (**q** is voiceless, **v** is voiced) → ilihar**rv**ik (**r** and **v** are both voiced)
ilinniaq + vik (**q** is voiceless, **v** is voiced) → ilinniar**rv**ik (**r** and **v** are both voiced)

The **q** becomes an **r** so that both consonants will be voiced. Spellings such as **ilihaqvik** or **ilinniaqvik** are incorrect.

Consonants can also be grouped according to what part of the mouth is used to make the sound. When we modify or correct a consonant to make it voiceless/voiced/nasal, it is still produced using the same part of the mouth:

Nipiqarniit Manner of Articulation	Nillirviit Place of Articulation	Qanikkut Labial	Sivuakkut Alveolar	Qilakkut Palatal	Aqinnikkut Velar	Niriliktaakkut Uvular	Iggiakkut Glottal
Nipiqanngittut Nuqqaqtaqtut Voiceless Stops		p	t		k	q	,
Nipiqanngittut Kajusijut Voiceless Continuants		[f]	s/l				h
Nipilit Voiced		v [b]	l [d]	j	g	r	
Nipilit Surlukkut Voiced Nasals		[m]	n		ng		

Inuktut Nipiqausiit

Inuktut Phonology Chart/August 2018

Consonants may be changed to another consonant in the same column to fit the consonant-cluster spelling rule. Note that **s/h** and **l** usually do not have to be changed in this way—when they occur in a cluster, it is usually the other consonant that changes.

The most common spelling errors involve the incorrect use of **q** versus **r** and **k** versus **g** versus **ng**.

Remember:

Before a voiceless consonant (**p, f, t, k, q, s/h**, or **l**), use a voiceless consonant: **q** not **r**, **k** not **g**, etc.

uqalaur <u>rtuq</u>	<i>should be</i>	uqalau <u>qtuq</u>
ukiurtaqtumi	<i>should be</i>	ukiu <u>taqtumi</u>
uqaalavviuqattarsimaningani	<i>should be</i>	uqaalavviuqatta <u>qsimainingani</u>
qainiar <u>rput</u>	<i>should be</i>	qainia <u>qput</u>
tuhaqtitauju <u>ghat</u>	<i>should be</i>	tuhaqtitauju <u>khat</u>
umig <u>himaniaqtut</u>	<i>should be</i>	umi <u>khimaniaqtut</u>

Before a voiced consonant (**v, l, j, g, r, b**, or **d**), use a voiced consonant: **r** not **q, g** not **k**, etc.

iliha <u>qvigjuaq</u>	<i>should be</i>	ilihar <u>rvigjuaq</u>
nuna <u>qjuami</u>	<i>should be</i>	nunar <u>ruami</u>
hava <u>kvik</u>	<i>should be</i>	hava <u>gvik</u>
naunai <u>qlugit</u>	<i>should be</i>	naunair <u>lugit</u>
uvamni <u>klu</u>	<i>should be</i>	uvamni <u>glu</u>

Before a nasal consonant (**m, n, ng**, or **r**), use a nasal consonant: **r** not **q, ng** not **k** or **g**, etc.

iliharvi <u>kmit</u>	<i>should be</i>	iliharving <u>mit</u>
ilagi <u>kniq</u>	<i>should be</i>	ilagi <u>ngniq</u>
iliharni <u>qm</u> ut	<i>should be</i>	iliharni <u>rm</u> ut
kivgaqtu <u>qniq</u>	<i>should be</i>	kivgaqtu <u>turniq</u>
inuuhi <u>gkniqm</u> ullu	<i>should be</i>	inuuhi <u>gngnirm</u> ullu

Other issues with clusters

t before voiced sounds

In most dialects, **t** becomes a copy of the consonant that follows it:

mit + vik	→	mivvik
pisuktut + lu	→	pisuktullu

In Inuinnaqtun, **t** usually becomes **l**, regardless of the following sound:

mit + vik	→	milvik
pihuktut + lu	→	pihuktullu

Inuinnaqtun speakers sometimes have a tendency to write **tl** instead of **ll**, especially when adding **-lu**, **-li**, or **-luunniit** to a word ending in **t**. This should be **ll**, not **tl**.

aat la	<i>should be</i>	aall a
ilitquhit pitquhit lu	<i>should be</i>	ilitquhit pitquhillu

v in clusters

As noted before, **v** in clusters, especially followed by **l**, has a more **b**-like pronunciation, but is still written as **v** in qanuijaaqpait (syllabics).

tab lu or tap lu	<i>should be</i>	tav lu
abguqtuq	<i>should be</i>	avguqtuq

ph versus ff

In dialects that have **h** instead of **s**, a **p** sound and an **h** sound coming together are written as **ph**, though the pronunciation may sound more like **f** (as in the English **physics**). The **ph** sound is written as **ff** in Inuinnaqtun.

pitsi, pissi, pipsi, piphi, piffi	
tamatsi, tamassi, tamapsi, tamaphi, tamaffi	

rj, gj, dj, bj, and jj

Some people write the hard **j** sound (as in the English **judge**) as **tj** or **tdj** to emphasize that the pronunciation is sharper than the single **j**, but this is not necessary. When we see a single **j**, we know it is pronounced like the sound in the English **yes**. When we see **jj**, **rj**, **gj**, **dj**, or **bj**, they are pronounced like the sound in the English **judge**.

pijjuti, arjak, ugjuk, tadja, kibjaut

ts

ts may be pronounced like “tch,” but is still spelled **ts**.

atchak	<i>should be</i>	atsak or attak
kutchuk	<i>should be</i>	kutsuk
natchiq	<i>should be</i>	natsiq or nattiq

Valid consonant clusters

The table below shows all possible consonant clusters that can appear in Inuktut standard spelling, with example words from different dialects. All other consonant clusters are not valid and do not adhere to Inuktut spelling standards. Remember that **r** can be either voiced or nasal. In some dialects, like Netsilingmiut, where **jr** occurs, the **j** is replaced with a retroflex **r**, which sounds similar to the **z** in the French *azure*.

Other common pronunciation/spelling issues

This section describes some other common issues that come up when writing in Inuktut, and their solutions.

Long versus short vowels, single versus double consonants

Take care to observe the difference between long and short vowels, and between single and double consonants.

t <u>a</u> nna	<i>should be</i>	taanna
ilagiarlugill <u>un</u> iit	<i>should be</i>	ilagiarlugill <u>uun</u> niit
u <u>val</u> u	<i>should be</i>	uvvalu
qanuri <u>tu</u> q	<i>should be</i>	qanurittuq

The correct spelling here will depend on the exact word. You can check the spelling in a dictionary such as Elisapee Ootoova's *Uqausiit Tukingit* (for North Baffin) or Gwen Angulalik's *Inuinnaqtun English Dictionary*. Or simply listen carefully to your own pronunciation, saying the word slowly and distinctly to hear whether the sound is pronounced short or long and whether that makes a difference in meaning.

g versus r versus q

Some people may confuse the **g** and **r** sounds in spelling, as they do sound similar (both pronounced far back in the mouth). Check the spelling in a dictionary, or listen carefully to the way you pronounce the word and “feel” where the sound is in your mouth. If you feel the sound high up against the roof of your mouth, it is **g**; if you can really feel it in the back of your throat, it is **r**.

titigaqtuq	<i>should be</i>	titiraqtuq
qanugittuq	<i>should be</i>	qanurittuq

Sometimes **g** versus **r** versus **q** errors are also combined with errors in following the consonant-cluster rule:

api gh uuti	<i>should be</i>	api q huuti
--------------------	------------------	--------------------

Nasal ng versus r

People may also incorrectly write **ng** instead of **r** before a nasal. It can sometimes be hard to hear the difference between **ng** and **r** before a nasal—again, try listening and feeling how you pronounce the word in your mouth. If the back of your tongue is going up to the roof of your mouth, it is **ng**. If you are pronouncing the sound very far back in your throat, it is **r**.

Another tip to remember: if a word or word root normally ends in **q** and you add an ending that begins with **m** or **n**, the **q** becomes **r**; if the word normally ends in **k**, the **k** becomes **ng**.

angnaq	<i>should be</i>	arnaq
atungn <u>ni</u> q	<i>should be</i>	aturniq (look at the word root: atuq)

nng versus n'ng

The long or double version of the **ng** sound is written as **nng** in Roman.

sanan**nng**uaq/hanan**nng**uaq
san**nng**ijuq

However, in some dialects, it is also possible to have a cluster of an **n** sound (not an **ng** sound) followed by the **ng** sound. If the writer wishes to distinguish this sound from the long **nng**, then this **n + ng** cluster may be written with an apostrophe (') after the first **n** to show that this **n** is a different sound from the following **ng**.

avin'**n**gaq
niaqun'**n**gujunga

This distinction is optional in Inuktut standard spelling. It can be used for writing dialects that have this pronunciation, but it is not otherwise used.

The glottal stop

Some dialects, mostly in the Kivalliq region as well as the Nattilik dialect, have a sound called the *glottal stop*, pronounced like a “catch” in the throat before another consonant: **ma'na**, **qi'miq**, **Qamani'tuaq**. If we want to show this sound in writing, it is written with an apostrophe ('), not a **t** or **p** as is sometimes seen.

mat n a	should be	ma'na
qi t miq, qip m iq	should be	qi'miq

Confusion with the other apostrophe marking an **n + ng** cluster (**n'ng**, as in **avin'n**gaq) is avoided because the glottal stop is always after a vowel, whereas with **n'ng**, the apostrophe is always after an **n**.

Again, the use of the glottal stop is optional in Inuktut standard spelling. It can be used for writing in dialects that have this sound, but it is not otherwise used.

Word endings

This section addresses some of the common issues that come up in spelling the endings of words.

The final n

In most of eastern and central Nunavut, words only end in either a vowel or the voiceless sounds **p**, **t**, **k**, or **q**. In their everyday pronunciation, people may pronounce the final **t** as **n** or the final **k** as **ng** to make the words “flow” better—for example, saying “Iqaluin” instead of “Iqaluit.” However, this pronunciation is optional, does not affect the meaning, and is *not reflected in spelling*: we always write **Iqaluit** not **Iqaluin**, **Aatuvaamut** not **Aatuvaamun**, and so on.

In Inuinnaqtun, on the other hand, using a nasal sound at the end of the word can sometimes distinguish different words—for example, **iglut** (“houses”) versus **iglun** (“your house”). Therefore, a final **n** may sometimes be used in spelling certain words in Inuinnaqtun.

In Inuinnaqtun, the following types of word endings are spelled with a final **n**:

- Nouns ending in **t** in the basic form: **angun**, **apun**, **uumman**
- Words talking about “you” or “your”: **iglun**, **inrutaqtin**, **tuhaqtutin**
- The noun endings **-mun** (“to”), **-min** (“from”), **-kkun** (“through”), and **-tun** (“like”)

Other types of word endings are spelled with **t**, even in Inuinnaqtun:

- Plurals ending **-it** or **-t**
- Words talking about “we”/“us”/“our”: **-vut**, **-jugut**, etc.

-mi *versus* **-mik** *versus* **-mit**

Another spelling point to keep in mind is to differentiate properly between the endings **-mi**, **-mik**, and **-mit**.

-mi marks the *location where* or *time when* something happens. **-mik** marks the *object that undergoes an action*. **-mit** means “*from*.”

kiinaujakkuving**mi** iqqanaijaqtunga
(the bank is where I work, so **-mi** is used)

pinasuarusiulaaqtumi qikalaaqtuguk
(next week is when we [2] are going on vacation, so **-mi** is used)

nutaarm**mik** nasarm**mik** atuqtunga
(the new hood is what I am wearing, so **-mik** is used)

kuung**mit** imiqtaqattaqtugut
(the river is where we [3+] get the water from, so **-mit** is used)

Some Inuit, especially in South Baffin, tend to pronounce both **-mik** and **-mit** as **-mit**. But in spelling, **-mik** and **-mit** should always be differentiated so that the meaning will be clear.

Katimajiralaat Kangiqlinir**mit** katimalaaqtut
should be

Katimajiralaat Kangiqlinir**mi** katimalaaqtut
(*location where*)

Ujjiqsuttiarnir**mit** quajimaquajaujugut
should be
Ujjiqsuttiarnir**mik** quajimaquajaujugut
(*caution is what we are told to use*)

-ni versus -nik versus -nit

The same rule applies for the plural forms of the endings **-ni**, **-nik**, and **-nit**.

kiinajakkuving**ni** Inuktuurunnaqtuqaruminaqpaktuq
(*the banks are where it would be nice to see Inuktut speakers, so -ni is used*)

nutaarn**nik** qarasaujaqtaalaaqtugut
(*it is new computers we are getting, so -nik is used*)

iqqanaijaqt**nit** titirarviusimajugut
(*it is the employees [3+] we are getting letters from, so -nit is used*)

Conclusion

Inuktut spelling standards help make communication between regions and dialects easier. All materials written in Inuktut should follow these standards to ensure that materials can be produced that will benefit all of Nunavut.
